

AqBanking - Bug #126

Neuanlegen eines comdirect-Kontos scheitert an TAN-Verfahren

04.10.2019 10:29 - Anonym

Status:	Closed	Beginn:	04.10.2019
Priorität:	Normal	Abgabedatum:	
Kategorie:	AqBanking		
Betriebssystem:	Linux	Anwendung:	KMyMoney, aqbanking-cli
AqBanking-Version:	5.8.2	Version der Anwendung:	

Beschreibung

Da der Zugriff auf das comdirect-Konto (vermutlich wegen der PSD2-Umstellung) nicht mehr funktioniert hat, habe ich es mit Neuanlegen versucht - zuerst über KMyMoney (5.0.6) und danach über das CLI. Bei beiden scheitert es an der gleichen Stelle:

```
$ aqbanking-cli versions
Versions:
AqBanking-CLI: 5.8.2
Gwenhywfar    : 4.20.2.0
AqBanking     : 5.8.2.0

$ aqhbci-tool4 adduser -N "REDACTED" -t pintan -b 20041111 -u XXXXXXXX -s "https://fints.comdirect.de/fints" --hbciversion=300

$ aqhbci-tool4 getsysid -u XXXXXXXX

Historie

#1 - 04.10.2019 10:33 - ipwizard

Diese Versionen sind zu alt! Von KMyMoney brauchst Du mindestens 5.0.7. Von AqBanking und Gwen empfehle ich die aktuellen Versionen oder gleich git-master.

#2 - 04.10.2019 10:56 - Anonym

Danke für die schnelle Antwort. Ich hätte nicht erwartet, dass die Version bei Arch Linux soweit hinterherhinkt, obwohl die erst vor wenigen Tagen aktualisiert wurde. In der aktuellen git-Version von AqBanking scheint das Problem schon behoben zu sein. Das Issue kann somit geschlossen werden.

#3 - 04.10.2019 10:59 - ipwizard

- Status wurde von New zu Closed geändert
