Hmm, I'm unable to apply this patch to GIT master. Did you create those patches against a current master?

#2 - 25.08.2022 23:39 - wrobelda

Yeah, my bad, this was created after the patch I included here: <https://www.aquamaniac.de/rdm/issues/282>

Basically what it does is that it literally wraps all occurrences of #include <unistd.h> with HAVE_UNISTD_H guard

#3 - 25.08.2022 23:44 - martin

Yes, I understand what the patch does, its just that I can't apply it.

I don't understand why that is because the patch looks quite straightforward ...

#4 - 25.08.2022 23:49 - wrobelda

Some of the files it touches I had also previously modified in relation to string.h includes, hence the rejections. I have ~20 of these patches, which I kept adding to my local branch, but not all of them are actually inclusion-worthy, like the <strings.h> patch I discuss in that other issue.
