

AqBanking - Feature #283

[PATCH] Prepare .pc and .cmake for static builds

26.08.2022 00:03 - wrobelda

Status:	New	Beginn:	25.08.2022
Priorität:	Normal	Abgabedatum:	
Zugewiesen an:		% erledigt:	0%
Kategorie:	Gwenhywfar	Geschätzter Aufwand:	0:00 Stunde
Zielversion:		Anwendung:	andere
Betriebssystem:	andere	Version der Anwendung:	
AqBanking-Version:	5.10.1		
Beschreibung			
This adds support for consuming a gwenhywfar that was compiled statically. Note that it does not guarantee the actual functionality of gwenhywfar compiled as such, but it prepares .pc and .cmake files for that.			

Historie

#1 - 26.08.2022 00:26 - wrobelda

Just realized that additional work in similar fashion is required for the GUIs, for their .pc.in and/or cmake.in, for all their own dependencies that they use.

#2 - 26.08.2022 11:06 - wrobelda

I'm also thinking that the pkg_check_modules() calls in cmake.in can be replaced with ordinary find_package() calls, if available, like for FindGnuTLS. Can be guarded with the minimum required CMake version number, per the find module's documentation (e.g. 3.16 for FindGnuTLS)
