Betriebssystem:	Linux	Version der Anwendung:	5.1.3
AqBanking-Version:	Unknown		
Beschreibung			
Original post to https://bugs.kde.org/show_bug.cgi?id=485033			
SUMMARY			
After changing the user/bank HBCI url it is not used to fetch certificate - the old URL is used instead as long as i do not close the dialog.			
STEPS TO REPRODUCE			
1. Have AqBanking with one HBCI user account configured			
2. Open "Einstellungen" -> "AqBanking einrichten" -> "Benutzer bearbeiten" (english might be: Menu "Settings" -> "Configure AqBanking" -> "Edit user")			
3. Change the HBCI server URL to something new			
4. Press button "Abruf des Zertifikats" (fetch certificate)			
The old server URL is used to fetch the certificate, the newly entered URL is ignored as long as i do not close the dialog with "OK"and reopen it.			
OBSERVED RESULT			
Old server URL (as shown on dialog opening) is used to fetch the URL.			
EXPECTED RESULT			
After changing the server URL the new URL entered should be used to fetch the certificate.
