AqBanking-Version:			
Beschreibung			
Showing the help screen with aqbanking 5.8.1 returns			
<pre>H:\bin>aqhbci-tool4.exe --help Usage: aqhbci-tool4.exe [GLOBAL OPTIONS] COMMAND [LOCAL OPTIONS] Global Options: [-C PARAM] [--cfgfile=PARAM] Specify the configuration file [-P PARAM] [--pinfile=PARAM] Specify the PIN file [-n] [--noninteractive] Select non-interactive mode. This automatically returns a confirmative answer to any non-critical message. [-A] [--acceptvalidcerts] Automatically accept all valid TLS certificate [--charset=PARAM] Specify the output character set [-h] [--help] Show this help screen. For help on commands, run aqhbci-tool <COMMAND> --help. Commands: mkpinlist: This command creates an empty PIN file adduser: Adds a user (-> setup HBCI for a bank) deluser: Deletes a user. getkeys: Requests the server's key getcert: Requests the server's SSL certificate createkeys: Create user keys.</pre>			

```

sendkeys:
    Send the user keys to the bank.

getaccounts:
    Requests account list for a user

getaccsepa:
    Requests SEPA account list for a user

getsysid:
    Requests a system id for the given user

getitanmodes:
    Requests supported iTAN modes for the given user

listusers:
    List the users

listaccounts:
    List the accounts

changePIN:
    Change the PIN of a key file

iniletter:
    Print the INI letter for a given user

addaccount:
    Manually add account

delaccount:
    Deletes account

sethbciversion:
    Set the HBCI protocol version to be used

setMaxTransfers:
    Set the maximum number of transfers/debit notes per job

setsepaProfile:
    Set the SEPA profile for transfers/debit notes

setTanMediumId:
    Set the medium id for some PIN/TAN methods (like mTAN)

```

while a build from git master returns:

```

G:\bin> aqhbci-tool4.exe --help
This is version 5.99.35
Usage: aqhbci-tool4.exe [GLOBAL OPTIONS] COMMAND [LOCAL OPTIONS]

Global Options:

[-D PARAM]
[--cfgdir=PARAM]
    Specify the configuration folder

[-n]
[--noninteractive]
    Select non-interactive mode.
    This automatically returns a confirmative answer to any non-critical
    message.

[-A]
[--acceptvalidcerts]
    Automatically accept all valid TLS certificate

```

```
[--charset=PARAM]
  Specify the output character set
```

```
[-P PARAM]
[--pinfile=PARAM]
  Specify the PIN file
```

```
[-h]
[--help]
  Show this help screen. For help on commands, run aqbanking-cli <COMMAND> --help.
```

There are no commands listed

Please note that the commands are available like 'listusers'

Also note that the help screen refers to 'aqbanking-cli', not 'aqhbci-cli', which is expected.
