Beschreibung			
Hi, I'm trying to implement aqbanking in a python program. In the readme file is a mention of python wrappers but I cannot find any example how to use it. Could you please give me a example how to use aqbanking inside python? First aim would be to get a list of transactions of an account. Hope you can help me. Thank you very much.

There currently are no python wrappers in AqBanking.

We had those in ancient versions of AqBanking, but nobody used them, so they were removed.
